http://docs.blackberry.com/en/smartphone_users/categories/?userType=1&category=BlackBerry+Smartphones

A) **"Use hands-free if available and keep the Blackberry at least .98 in. from your body, "including the abdomen of pregnant women and the lower abdomen of teenagers. "**

B) **"A few animal studies, however, have suggested that low levels of RF could accelerate the development of cancer in laboratory animals. In one study, mice genetically altered to be predisposed to developing one type of cancer developed more than twice as many such cancers when they were exposed to RF energy compared to controls."**

C) **"...an association was found between mobile phone use and one rare type of glioma, neuroepitheliomatous tumors"**

D) **"None of these tests showed any effect of the RF except for the micronucleus assay, which detects structural effects on the genetic material. The cells in this assay showed changes after exposure to simulated cell phone radiation"**

E) **"Some people who have used mobile phones have been diagnosed with brain cancer."**

F) **"When tumors did exist in certain locations, however, they were more likely to be on the side of the head where the mobile phone was used."**

Additional information in the Motorola manuals on how consumers should try to protect themselves from harmful cell phone radiation...

Those persons who spend long periods of time on their hand-held mobile phones could **consider holding lengthy conversations on conventional phones** and reserving the hand-held models for shorter conversations or for situations when other types of phones are not available. **People who must conduct extended conversations in their cars every day could switch to: "**

- **a mobile phone in which the antenna is located outside the vehicle**
- **a hand-held phone with a built-in antenna connected to a different antenna mounted on the outside of the car or built into a separate package**
- **a headset with a remote antenna to a mobile phone carried at the waist**

Lawsuit against Orange: the cell phone radiation caused cancer

10/6/2010 Shimon Ifargan

A', a father of 5, a lawyer for many years, used to talk for long time with his customers during his work. Big part of his conversations were with the cell phone. During the call he felt his ear warming, and 2.5 years ago he felt swelling near his left ear. A' went to a medical check up in the hospital, where they informed him that he suffered of malignant aggressive lymphoma, a disease which shortens the person's life in half. Following the disease, he received chemotherapy and is under medical follow up. A' decided to check what caused the fatal cancer, and he ordered a company that measures RF. The findings pointed for certain on an increase of the radiation level from the cell phone. With the help of lawyer Gideon Paner he filed a lawsuit to the district court in Beer Sheva against Partner company for sum of 10 million shekels. Many experts opinions were attached to the lawsuit claiming that the long term cell phone use is what caused his cancer. "In A' several causes were joined together, and it possible to associate in causal relationship, the appearance of the lymphoma and cell phone use", wrote in his expert opinion professor Shmuel Ariad , manager of oncology arrangement in Soroka hospital in Beer Sheva. Professor Reuven Hod, manager of bone marrow transplants in Hadassa hospital and hematology expert, wrote that the cancer arrived on the background of excess exposure to cell phone radiation, to which A' was exposed during two years before the development of the disease. In the lawsuit, A' attributes a line of negligences and omissions to Partner company, that did not warn him and the public from the dangers of long term cell phone use. According to him, the company did not regulate the way mobile phones were marketed and did not do examinations to verify the radiation levels that are emitted from the mobile phones. According to his claim, even though he approached the company several times to receive data on the radiation level that is emitted from the mobile phones, his requests were ignored. In the lawsuit, A' claimed that following his disease he had to neglect his work and big financial damage was caused to him, apart from the tough treatments he is going through.
